

From a raw adverse-condition image to one budget-feasible static output

(a) Raw adverse-condition image

ACDC/rain · held-out

(b) Prepare tiny input

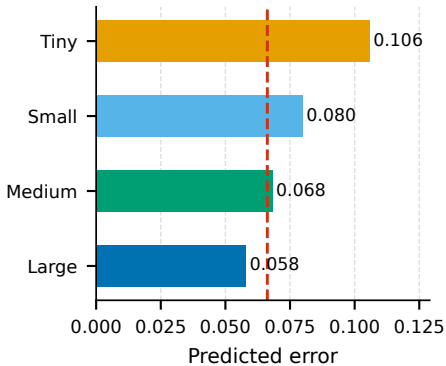

resize
384 x 192
+ normalize
fixed-shape tensor

(c) Tiny probe

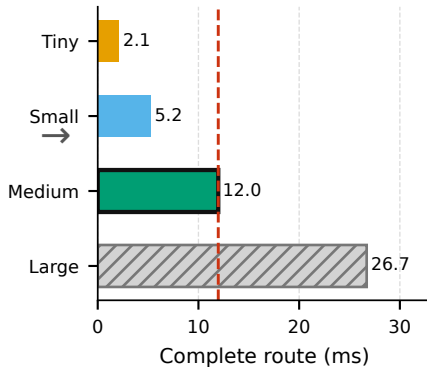

mean entropy
 $s(x) = 0.461$

(d) Candidate risks ($\tau=0.066$)

(e) E3 feasibility ($B=11.97$ ms)

(f) Selected: Medium
