

(a) Same device, different inputs

easier: $s(x)=0.39$

routed

harder: $s(x)=0.70$

routed

(b) Same image, other hardware

AGX Xavier, budget 19.5 ms

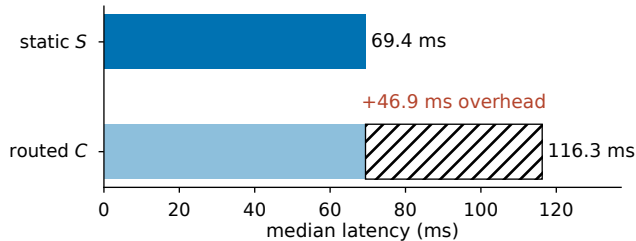

Hailo-8, budget 76.2 ms

Hailo-8 large
route 116.3 ms:
infeasible

(c) ...but routing costs time (Hailo-8, large)

Break-even overhead: 4.3 ms (Hailo-8), 1.3 ms (AGX).
Per-frame budgets: static wins at any overhead.
